PROFESSIONAL SUMMARY

Data Analyst with hands-on experience building cloud-native BI pipelines on AWS and GCP, ELT pipelines using Snowflake and dbt, and AI-powered analytics apps using LangChain. Built production-style systems processing 13M+ records. Google BI Professional Certified. Graduating 2027.

TECHNICAL SKILLS

BI & Data Tools: Power BI, Google BigQuery, SQL (MySQL), Tableau, Excel, DAX.

Programming: Python (Pandas, NumPy, Matplotlib, Boto3, LangChain).

Analytics: KPI Development, Dashboard Design, Data Visualization, Exploratory Data Analysis (EDA), Customer Segmentation, Product Analytics, Business Intelligence, Statistical Analysis, Basic Machine Learning Models.

Cloud: Google Cloud Console, AWS (S3, IAM, Glue ETL, Glue Data Catalog, Amazon Athena, AWS Lambda, CloudWatch, Event Driven Architecture), Snowflake.

AI & LLM: LangChain, Groq API, Prompt Engineering, Streamlit.

Other: Git & GitHub, Stakeholder Reporting, Data Cleaning & Preprocessing, dbt Core.

PROJECTS

Indian Aviation Intelligence System

2026

Tools: AWS S3 · Glue ETL · Athena · Lambda · Power BI · Python (Pandas, Boto3) · SQL

- Architected serverless data lake on AWS S3 with structured raw/processed/output layers following industry data lake design patterns.
- Built AWS Glue ETL job in Python processing 50,000 Indian flight records, added 8 derived columns including route classification, price categorization, duration parsing, and weekend detection.
- Implemented event-driven ETL automation using S3 triggers and AWS Lambda, new file uploads automatically trigger processing pipeline with zero manual intervention.
- Queried processed S3 data lake using Amazon Athena serverless SQL uncovering key insights: Vistara leads premium pricing, DEL-BOM is busiest route with 2,265 flights, February peaks travel demand.
- Monitored pipeline execution using CloudWatch log streams, tracked transformation steps with millisecond level timestamps.
- Built and published live Power BI dashboard connected to Athena via ODBC, featuring 3 analytical pages with AI-powered Key Influencers and forecasting visuals on 50,000 row dataset.

Cyclistic Bike Share Demand Analysis

2026

Tools: Power BI · Google BigQuery · SQL · DAX · Google Cloud Console

- Built an end-to-end BI workflow using Google BigQuery and Power BI to analyze 13M+ bike-share trip records, transforming raw public datasets into structured analytical tables.
- Processed and filtered large-scale datasets using SQL in BigQuery, reducing raw data into a 3M+ row analysis-ready dataset optimized for reporting and visualization.
- Developed interactive Power BI dashboards with 8+ KPIs, including total trips, trip duration, station utilization, and rider distribution.
- Created 3 stakeholder-focused analytical reports covering trip demand trends, station usage hotspots, and seasonal riding patterns.
- Designed visualizations such as station demand maps, top-10 station analysis, and time-based demand trends to support operational decision-making.
- Identified key insights including peak riding hours, busiest stations, and behavioral differences between subscriber and casual riders, helping highlight potential station capacity and demand management opportunities.

Zomato Restaurant Analytics Pipeline

2026

Tools: Tableau · Snowflake · SQL · dbt Core · Python

- Built end-to-end ELT pipeline ingesting 51,719 Zomato restaurant records into Snowflake via stage-based COPY INTO loading.
- Designed 2-layer dbt transformation architecture (staging + mart models) with data cleaning, type casting, and business logic including rating categorization.

- Implemented 6 automated dbt data quality tests (not_null, accepted_values) identifying and resolving data quality issues in source.
- Generated automated data lineage documentation using dbt docs, visualizing full raw-to-mart dependency graph.
- Connected Tableau to Snowflake mart model, published interactive dashboard on Tableau Public.

Retail Sales & Profit Intelligence System

2025

Tools: SQL (MySQL) · Power BI · Data Modelling · Star Schema

- Built a multi-page business intelligence analytics system to analyze 5K+ retail transactions generating \$2.3M+ in sales and \$286K+ in profit, transforming raw sales data into structured analytical tables using a star schema data model.
- Designed and implemented a fact table with 4-dimension tables (Customer, Product, Date, Geography) to enable efficient query performance, accurate KPI calculations, and scalable reporting.
- Developed 15+ interactive KPIs and visualizations, including total sales, profit margin (12.47%), YoY growth (46.88%), regional performance, and product profitability.
- Created role-based analytical dashboards including Executive Overview, Sales Intelligence, Product Analytics, Customer Insights, and Geographic Analysis to support different stakeholder perspectives.
- Performed customer, product, and regional performance analysis to identify top-performing products, high-value customers, and regional sales trends influencing revenue growth.
- Delivered data-driven insights through interactive dashboards, enabling better decision-making on inventory planning, customer segmentation, and regional sales strategy.
- Ensured accurate business reporting through structured dimensional modeling, improving analytical clarity and reducing data redundancy across reporting layers.

CSV Chat AI

2026

Tools: LangChain · Groq API · Llama 3.1 · Streamlit · Python

- Built AI-powered web app enabling natural language querying of any CSV dataset — users upload a file and ask questions in plain English.
- Implemented LangChain CSV agent using ReAct reasoning pattern where LLM autonomously writes and executes pandas code to answer questions.
- Added persistent chat history using Streamlit session_state for multi-turn data conversations.
- Deployed live on Streamlit Cloud — publicly accessible at csv-chat-ai.streamlit.app

CERTIFICATIONS

Google Business Intelligence Professional Certificate

Coursera · 2026

- Completed end-to-end BI workflow covering data extraction, transformation, visualization, and dashboard design.
- Built dashboards in Power BI; worked with BigQuery cloud datasets and advanced SQL analysis.

Product Analytics Certification

Pendo.io · 2026

- Studied product analytics metrics including user engagement, retention, and feature adoption.
- Analyzed user behavior data to support data-driven product decisions.

EDUCATION

Bachelor of Engineering – Computer Engineering

2027

Trinity Academy of Engineering, Pune · CGPA: 8.73

Higher Secondary Education (PCMB)

2023

Vishwakarma College of Arts, Commerce and Science, Pune

Secondary School Education

2021

The Bishops Co-Ed School, Undri, Pune

LEADERSHIP & ACTIVITIES

- Core Team Member – Organized an inter-college coding competition with participation from multiple colleges.
- Technical Team Member – Assisted in organizing technical events, bootcamps, and a month-long Generative AI initiative.
- Event Organizer – Coordinated a hackathon-style event in collaboration with an internal cybersecurity organization.
- Public Speaker – Delivered sessions explaining technical workflows and coordinated teams during campus events.
